**Let your  
Light shine**

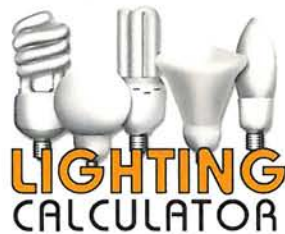

## Compact Fluorescent Light (CFL) bulbs:

- \* Save up to 73 percent on energy.
- \* Can last 13 times longer than incandescent bulbs.
- \* Average a 9-year life span.

Containing a very small amount of mercury -- 5 milligrams or about enough to cover the tip of a ballpoint pen -- a 20-watt CFL is equivalent to a 75-watt standard bulb. If there is no disposal facility, used CFLs may be sealed within two plastic bags for disposal with regular household trash.

Want to know how much money you can save by changing your standard light bulbs to CFLs? Compare the two bulb types and see your savings with the new Home Energy Calculators at [www.adamsec.coop](http://www.adamsec.coop).

You can also take the ENERGY STAR Challenge -- a national campaign to improve residential energy efficiency by 10 percent or more. For more information on this challenge and CFLs, visit the Energy Star website at [www.energystar.gov](http://www.energystar.gov).
